Professional Summary

Cybersecurity undergraduate with hands-on experience in penetration testing, detection engineering, and security automation, built through government VAPT work, independent research, and CTF competitions. Did authorized security testing for the NCCIA, found critical web application vulnerabilities, and wrote reports focused on fixing them. Built security tools including a self-hosted SIEM, behavior-based detection systems, and network analysis platforms. Active on HackerOne and in CTFs, with strong Python scripting skills and a growing focus on offensive security and threat detection.

Experience

VAPT Intern – *National Cyber Crime Investigation Agency NCCIA HQ, Islamabad*

Jun 2026 – Aug 2026

- Ran authorized penetration tests on government web applications and found four critical vulnerabilities, following OWASP Testing Guide methods.
- Found previously undocumented subdomains using OSINT, directory enumeration, and service fingerprinting, expanding the known attack surface.
- Confirmed high-severity vulnerabilities, including SSRF and IDOR, even with security controls in place, and documented working proof-of-concept exploits.
- Wrote CVSS-based vulnerability reports with fix guidance so teams could reproduce and resolve the issues.

Certifications & Achievements

- **Ethical Hacker** - Cisco Networking Academy Certification
- **ISO/IEC 27001:2022 Lead Auditor** - MasterMind Certification
- **Bug Bounty** - HackerOne (*BitR1ft*): Reported security findings across public bug bounty programs
- **HackTheBox** - Completed all attack chain labs of Intro to Red Team and CPTS Preparation Tracks
- **CTF Competitions** - Placed in BlackHat MEA 2025 qualifiers, AirTech, Softec, MetaCTF, Nexus, CSL
- **Cryptography Research** - Designed and implemented an image encryption algorithm for academic research.

Technical Skills

SIEM & Detection Engineering: Splunk, Wazuh, Elastic Stack (ELK), Sigma Rules, MITRE ATT&CK

Threat Intelligence: MISP, OpenCTI, VirusTotal API, AbuseIPDB, IOC enrichment

Penetration Testing: Burp Suite, Nmap, ffuf, nuclei, sqlmap, Metasploit, Hydra, OpenVAS and more

Digital Forensics: Wireshark, PCAP analysis, TCP session reconstruction, evidence preservation

Programming & Scripting: Python (primary), C++, Bash

Key Projects

SentinelHive - SelfHosted SIEM & Threat Hunting Platform *Independent Research*

Jan 2026

- Built a self-hosted SIEM with Splunk, Wazuh, and the Elastic Stack to monitor logins, endpoint activity, and network traffic across multiple machines.
- Wrote over 40 Sigma detection rules mapped to MITRE ATT&CK and tested them against realistic attack scenarios from Hack The Box labs.
- Automated alert enrichment with MISP, OpenCTI, VirusTotal, and AbuseIPDB to speed up investigations and cut down analyst workload.

SecureVPN - PostQuantum WireGuard VPN *Network Security Project*

May 2026

- Built a WireGuard VPN using a hybrid post-quantum key exchange, combining Kyber-512 and X25519.
- Built a Python Flask provisioning service supporting secure peer management, replay protection, Redis-based rate limiting, and Docker deployment.
- Developed a Windows client featuring automatic configuration, secure key storage using DPAPI, DNS leak protection, and a configurable kill switch.

SentinelTrace - Linux Syscall Tracing & Behavioral Analysis *Operating Systems Project*

April 2026

- Built a Linux behavior-monitoring system using ptrace to collect and analyze process syscall activity.
- Built a YAML-driven detection engine that can spot suspicious syscall sequences and behavioral anomalies.
- Built a PyQt6 dashboard with SQLite-backed forensic replay to visualize alerts and look into process behavior.

NetSpector - Network Traffic Analyzer *Computer Networks Project*

Dec 2025

- Developed a packet analysis platform for PCAP and PCAPNG inspection for incident response and network forensics.
- Added detection rules for SYN floods, port scans, DNS tunneling, credential leakage, and other unusual traffic patterns to catch threats earlier and support incident response.
- Added TCP session reconstruction, bidirectional flow analysis, and file carving capabilities.

Education

Bachelor of Science in Cyber Security (BSCYS) - *Air University, NCSA, Islamabad*

Aug 2024 – Present
